Abstract: With number of closing gymnasiums increasing exponentially, it entails the steady decline of unemployment in the fitness industry particularly amongst the fitness coaches or instructors. Thus, personal trainers and coaches do not have a dedicated platform during the pandemic to train students from home due to the COVID-19 Pandemic. Hence, this project aims to design, develop, and test a personal coaching mobile application called Coach Me by using the incremental prototyping as the software methodology to tackle these problems. The mobile application will be built using Flutter, a Dart framework, Node.js runtime environment and MySQL database. The significance of this project is that the mobile application boosts the camaraderie between trainers and their students even with the physical limitation of not being able to enter a gym providing a platform for both parties to connect. Albeit if the pandemic has reached its endpoint, the mobile application will not lose its traction and continue to thrive as it will drive coaches and students who are not able to attend a physical class in using the mobile application as a platform to professionally connect and re-watch video lessons. The results show the many of the test plan's actual outcome of each module were successful. The mobile application can be further improved by implementing a real-time peer-to-peer chatting functionality.

Keywords: Personal Coaching, Mobile Application, Flutter, Health, Fitness

1. Introduction

The year of 2020 has left many of us in a dismal tone and will be remembered as one of the worst global health crises in modern times going down in history, the COVID-19 pandemic [1]. According to a Worldwide Trade Group for the health and fitness sector, the fitness industry employed 3 million part-time and full-time personnel prior to the pandemic. However, with the steady incline of people being infected, more than 480, 000 jobs are getting destroyed per month all around the world. While other small companies might pivot to establish their own online commerce and takeout orders, health clubs and their staffs of personal trainers as well as fitness instructors has no such option. A professional fitness coach or instructor can be defined as a person who aid participants in exercise programs, evaluate various fitness components, instruct exercises to improve the participants heath, and help participants

with specific conditions [2]. With number of closing gymnasiums increasing exponentially, it entails the steady decline of unemployment in the fitness industry particularly amongst the fitness coaches or instructors.

Prior to the pandemic, coaches will teach a myriad of classes in their local gym depending on their skills and certifications. These classes typically last anywhere between an hour to 3 hours. Any people who are interested in joining their classes are then enrolled with a certain amount of fee in order to become a student of the class. A class is then divided into lessons where multiple students enrolled in the class will be coached simultaneously. For instance, the first lesson of a Yoga Class is warming up. Moreover, private sessions are also held in which the students are coached and given consultations one-to-one by the instructors. Importantly, the objective of their fitness programs aims to provide a social situation in which participants, supervised by licensed group fitness instructors, benefits socially and emotionally [3]. Case in point, physical classes is held within a local gym whereby students are coached by a certified or a skillful instructor.

Ergo, the aftermath forces most fitness coaches to resort to online classes by utilizing digital platforms such as WhatsApp, Zoom and Skype. Physical classes are substituted with online conference calls, while private sessions between a coach and a student are strictly forbidden, they are replaced with private chats which constricts the effectiveness of a consultation session as the coach cannot provide an accurate feedback and advice due the limited functionality of a private chat. The up-bringing atmosphere of conducting a class within a gym where music, fitness partners are no longer accessible. The effect of social distancing allotment on overall physical activity is an important stimulus of health, especially if social distancing is prolonged [4]. Thus, it implies that fitness centres will not be opening anytime soon.

Henceforth, a Personal Coaching Mobile Application (Coach Me) is proposed to connect fitness coaches and their students in a digital platform further cementing the effectiveness of a fitness class. The overview of the app is that personal coaches can upload, store their pre-recorded lessons in a class where students can enroll with a certain amount of fee based on the coach to then watch the pre-recorded lessons and follow along with their coaches. A private one-to-one session between a coach and a student can also be conducted. Students can then view their progress in class and consult with their coach to help clarify misunderstanding regarding a specific topic or asking for a few tips and tricks which they may not know due to their impeding progress. Albeit if the pandemic has reached its endpoint, the mobile application will not lose its traction and continue to thrive as it will drive coaches and students who are not able to attend a physical class in using the mobile application as a platform to professionally connect and re-watch video lessons.

This article is organized into five sections. The first part is an introduction describing the context of the project. The second section describes the literature review. In the third section, the methodology is explained. The implementation and testing of this system are described in the fourth section. In the last section, a conclusion with some instructions for future employment is given.

2. Related Work - Literature Review

The design of the mobile application leans towards coaches and their students. The proposed mobile application is targeted for everyone that wants to stay in shape by hiring a personal trainer in connecting coaches to their students by joining classes with pre-recorded video lessons by their coaches where students can watch and follow at their own pace. There are four primary features which make up the backbone of the mobile application, namely, Sign Up and Log In account, coaching feature, learning from pre-recorded lessons and personal session scheduling. The key characteristics were compared and analysed. It is the specifications of the systems were found. Table 1 shows the resulting comparison between the 3 existing systems.

3. Methodology

There are 7 phases in total namely, planning, analysis, design, user evaluation, implementation and testing. The goal of using a prototyping methodology is to explore, experiment and evolve. A prototyping development approach aids in building and refine, a product to meet end-user expectations [8]. Thus, the process of iterating the design, system prototyping, and user evaluation is key to assure user satisfaction. The prototyping process encourages the methodical development of applications by

breaking down complex problems into several complete yet simpler parts [9]. Table 2 shows the system development workflow of Coach Me mobile application.

There are total of nine phases from the prototype model. Each phase has its own task and output that need to produce during the entire project development. The table further shows the phases, tasks within a phase, and the output of the task in a concise manner.

Table 1: Modules, Function and User for Coach Me Mobile Application

System Module	Function	User
Sign Up and Log In	Sign Up and Log In This module is responsible for routing	
module	the users to dedicated pages when	Student
	authenticated.	
Coaching module	This module is responsible for the coach	Coach
	user to manage their class, revenues and	
	payments, lessons and pre-recorded	
	videos.	
Learning module	This module is responsible for the	Student
	student user to enroll or unenroll from	
	classes, lessons, watch pre-recorded	
	videos and make payments.	
Scheduling module	To manage a personal one-to-one session	Coach, Student
	between the coach and student user.	
Administrator module	To produce reports and handle account	Administrator
	deletions.	

To show the relationship between requirements and artifacts, requirement traceability matrix is used. Attached in **Appendix A** is the requirement traceability matrix the Coach Me mobile application.

Functional requirement is defined as capturing the expected behaviour of the system such as certain task to perform, services or the functions that are required for the system to perform [10]. Nonfunctional requirements describe how should the system perform said task or the performance, reliability, security and also the portability of the system [11]. Such requirements are key to designing a good system as it decides the alternative design, and characteristic selection of a system. Table 4 describes the functional requirements for each module.

Table 4: Functional Requirements Specification for Coach Me Mobile Application

No.	System Module	Functionality
1.	Sign Up and Log In	The system should allow the users to sign up by filling up
	module	their first name, last name, username, password, role, email,
		phone number and address.
		• The system should allow the users to log in with the correct
		username and password.
		The system should allow the users to reset their password
		through their email in case if the users forget their
		password.

The system should show a message if the username or password is incorrect. The system should allow the users that are signed into logout. Coaching module The system is able to show the coach user their account information. The system is able to show the coach user which students are enrolled in which class. The system should allow the coach user to create classes. The system should allow the coach user to create lessons within each created class. The system should allow the coach user to upload prerecorded videos within each created lesson. The system should allow the coach user to accept or decline a private one to one session request from a student user. The system is to ensure the coach user receives appropriate payment when the student user enrolls in their class. 3. Learning module The system is able to show the student user their account information. The system is able to show the student user their enrolled classes. The system should show the student user their available lessons The system should allow the student user to watch prerecorded videos within a lesson. The system should allow the student user to make payments during class enrolment. The system should allow the student user to request a personal one-to-one session with a coach based on the availability of the coach. 4. Scheduling module The system should allow the coach user to manage their available date and time for a personal one to one session The system should allow the student user to pick available date and time for a personal coaching session.

		• The system should not show the date and time that has
		passed.
		• The student user cannot pick a date and time that has
		passed.
5.	Administrator	The system should allow the administrator to approve
	module	student and coach user account deletion.
		• The system should generate monthly report for the coach
		rating.
		• The system should generate monthly report on the most
		popular categories.
		• The system should generate a monthly report for the
		number of engaged students.
		• The system should not allow the student and coach user to
		view the monthly reports.

The non-functional requirement can be defined simply as the constraints on the system design to ensure the effectiveness of the system. Table 5 shows the non-functional requirements of the Coach Me mobile application.

Table 5: Non-functional Requirements Specification for Coach Me Mobile Application

No.	Requirements	Description
1.	Operational	The mobile application is only for the Android operating system.
		• The update of the mobile application should be easily rolled
		out.
		• The application should be user-friendly.
2.	Performance	The time to load the mobile application should not be more
		than 3000 milliseconds.
3.	Security	The user password should be encrypted before storing in
		database.

3.1 Analysis

A use case diagram can be defined as the primary depiction of the user's interaction where by the base use case is the user's expected behavior. Figure 1 shows the use case diagram that represents the overall activity of the Coach Me Mobile Application.

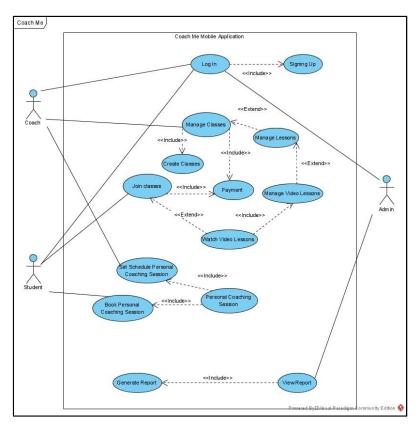

Figure 1: Use Case Diagram of Proposed System

To be model depicts how the system should behave as a proposed system. Moreover, the to-be model describes basic user and their actions. Figure 2 show the to-be model of the mobile application in UML Swimlane diagram.

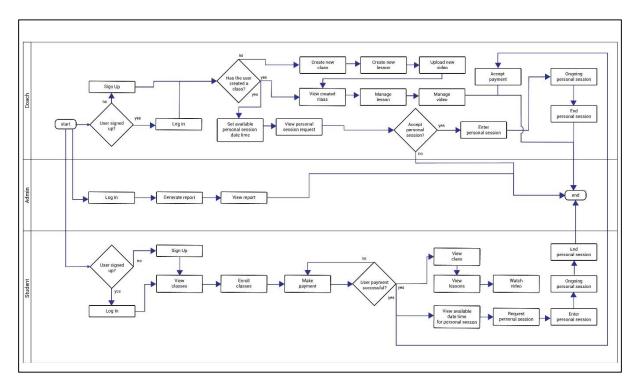

Figure 2: To-Be Model of Coach Me Mobile Application

3.3 User Interface Design

The mobile application user interfaced consist of a few parts. The log up and sign up, student home page, coach home page and also booking schedule. Figure 3 and 4 shows the sign up and log in user interface respectively. Upon loggin in, the student user will be brought to the student main page as show in figure 5. Figure 6 displays the coach main page when the coach user is authenticated.

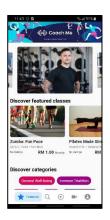

Figure 3: Sign Up

Figure 4: Log In

Figure 5: Student Main Page Figure 6: Coach Main Page

3.4 Database Schema

In order to design a normalized database, the database schema is needed. The schema for the database is listed as below:-

```
student(user id, username, name, email, telephone, user type, age,
       bank account)
       coach (user id, username, name, email, telephone, user type, age, field,
 ii.
       certificate, bank account)
iii
       admin(user id, username, name, email, telephone, user type, age,
       admin level)
 iv.
       category(category id, name, class id (FK))
       class (class id, title, description, category id (FK), coach user id,
  v.
       datetime creation)
 vi.
       lesson(lesson_id, title, description, class_id (FK))
       vii.
viii.
       teach(teach_id, coach_user_id (FK), class_id (FK))
       enrol1(enroll id, class_id (FK), student_user_id (FK), datetime_enrolled)
 ix.
       payment (payment id, class_id (FK), coach_user_id (FK), student_user_id
  х.
        (FK), coach_bank_account (FK))
 хi.
       receipt(receipt_id, receipt, date_creation, payment_id (FK))
       personal_session(personal_session_id, title, class_id (FK), coach_user_id
xii.
        (FK), student_user_id (FK), date_time)
xiii.
       session status (session status id, personal session id (FK), status)
xiv.
       report(report id, report type, scale, report date time)
```

4. Result and Discussion

The section discusses and present the results of the testing carried out on the produced mobile application. Overall, the results of this system's test cases suggest that it has been successfully developed and tested.

4.1 Test Cases

There test cases were produced as shown in **Appendix B.** There are no failed test cases in the overall test case findings for the produced mobile application. The Table shows the results of 6 system modules with a total of 33 test cases. The test cases for all of the system modules passes. The entire test case outcome is provided in Table 6.

Test Case Module	Number Of	Total Passed	Total Failed
Test Case Module	Test Cases	Test Cases	Test Cases
TC_100 (Sign up submodule)	4	4(100%)	0
TC_200 (Log in submodule)	3	3(100%)	0
TC_300 (Learning module)	8	8(100%)	0
TC_400 (Coaching module)	8	8(100%)	0
TC_500 (Scheduling module)	6	6(100%)	0
TC_600 (Administrator module)	4	4 (100%)	0

Table 6: Overall Result Test Cases

4.2 User Acceptance Test

Users can assist developers in identifying defects by performing this testing. The questionnaire given had a total of 30 participants. The results produced are analysed using column charts. Most respondents strongly agree that the mobile application is easy to understand, has suitable content layout and interface design as show in Figure 7.

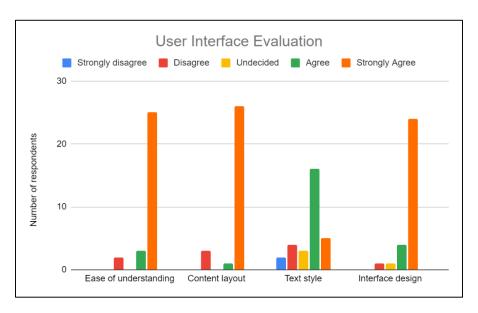

Figure 7: Result of application user interface evaluation

While majority of the respondent agree that the mobile application has suitable text style. In the chart for the application features, most respondents strongly agree with the design and features provided the developed application as shown in Figure 8.

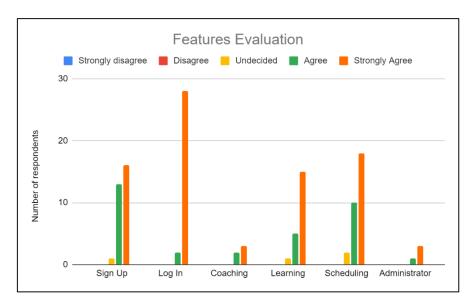

Figure 8: Result of application features evaluation

5. Conclusion

The conclude, The Coach Me Mobile application is developed based on the project planning. The mobile application will aid personal coaches and thier students to connect in a digital platform. Eventhough at any point of time in the future if the pandemic has reached its endpoint, the mobile application will not lose its traction and continue to thrive as it will drive coaches and students who are not able to attend a physical class in using the mobile application as a platform to professionally connect. It will also boost the camaraderie between trainers and their students even with the physical limitation of not being able to enter a gym. The methodology used in developing the system is incremental prototyping system. Based on the systems model, the system has also been developed in accordance with the architectural design, UML diagrams and also system analysis. Microservice system architecture is utilized to decouple the front-end from the server and database by using Flutter and Node.js respectively. However, only one student and one coach is allowed for a session, there is no group session. The mobile application developed hopes to lessen the number of unemployed personal trainers by providing a platform for said personal trainers and students to connect which in turn drives the traction within the health and fitness industry.

Although the system has achieved its objective, there are still several improvements to be made to further increase the functionality by implementing real-time peer-to-peer chatting submodule and using load balancers for system scalability. Moreover, reminders to watch classes and push notification of the coaches creates a new class or upload a new video could also be added in the future to further boost he functionality of the mobile application.

	SRS_REQ_311	Coach presses delete lesson button.
	SRS_REQ_312	System drops lesson from database records.
	SRS_REQ_313	Coach presses delete class button.
	SRS_REQ_314	System drops class from database records.
Scheduling	SRS_REQ_401	Coach presses set available session button.
SRS_REQ_400	SRS_REQ_402	system shows time and date for a personal session in a class.
	SRS_REQ_403	Student picks time and date for personal session in class.
	SRS_REQ_404	Coach presses confirm button.
	SRS_REQ_405	Coach receive notification for the requested session.
Administrator	SRS_REQ_501	Administrator chooses reporting tab.
SRS_REQ_500	SRS_REQ_502	System generates report for highest rated coach.
	SRS_REQ_503	System generates report for most enrolled class.
	SRS_REQ_504	System generates report for personal sessions per week/
		month.
	SRS_REQ_505	Administrator presses button print report.
	SRS_REQ_506	System generates report in pdf format.

Appendix B

No.	Test cases	Description
TC_	100	
1.	TC_100_001	Verify when user enters nothing in the sign-up form upon
		taping the sign-up button, an error message will be shown.
2.	TC_100_002	Verify if users enter existing records in sign up form, the
		system will display an error message.
3.	TC_100_003	Verify when user enters invalid characters in the sign-up
		form, the system will show an error message.
4.	TC_100_004	Verify upon successfully completing the sign-up form and the
		sign-up button is tapped, the user's records will be created, and
		the correct route shall be directed.
TC_	200	
1.	TC_200_001	Verify when user enters null details in the log in form then
		tapping the log in button, an error message will be shown
2.	TC _200_002	Verify when the user enters incorrect credentials then tapping
		the log in button, an error message will be shown
3.	TC_200_003	Verify when the user enters correct credentials then tapping
		the log in button, the user will be redirected to the correct
		route
TC_	300	
1.	TC_300_001	Verify that students enrolled classes are shown
2.	TC_300_002	Verify student is directed to class landing route when the class
		card is tapped
3.	TC_300_003	Verify student is directed to coach profile route when the coach
		card is tapped.
4.	TC_300_004	Verify student can view their profile when the account button
		is tapped.
5.	TC_300_005	Verify student can change their password if and only if they
		entered their previous password.
6.	TC_300_006	Verify student can edit their profile upon tapping edit profile
		button
7.	TC_300_007	Verify student can request to close their account upon long
		pressing the close account button
8.	TC_300_008	Verify student will be directed to the payment route upon
		tapping the enrol button.

TC_	400	
1.	TC_400_001	Verify an error message will be shown if the coach does not fill
		up the entire create class form upon tapping the create class
		button
2.	TC_400_002	Verify coach can view the details of created class.
3.	TC_400_003	Verify an error message will be shown if coach does not fill in
		the edit class form upon tapping the confirm edit class button.
4.	TC_400_004	Verify an error message will be shown if coach does not fill in
		the edit lesson form upon tapping the confirm edit lesson
		button.
5.	TC_400_005	Verify an error message will be shown if the coach does not fill
		up the entire create lesson form upon tapping the create lesson
		button
6.	TC_400_006	Verify both enrolled students and coach of the class can view
		all the video lessons upon tapping the play button icon.
7.	TC_400_007	Verify upon coach tapping the delete class button, the class
		records will be destroyed in the database
8.	TC_400_008	Verify upon coach tapping the delete lesson button, the lesson
		records will be destroyed in the database
TC_	500	
1.	TC_500_001	Verify coach is directed to session set page when the set session
		button is tapped
2.	TC_500_002	Verify coach is not able to pick past date as a session
3.	TC_500_003	Verify student is directed to book session page when the book
		button is tapped.
4.	TC_500_004	Verify student cannot book another session after the booked
		session has passed or rejected
5.	TC_500_005	Verify coach can view the requested bookings by student
6.	TC_500_006	Verify when coach accepts a student, all bookings of related
		class will be rejected and rescheduled.
TC_	600	
1.	TC_600_001	Verify Report of highest number of categories in format of pdf
		is shown when the button generate report is pressed.
2.	TC_600_002	Verify Report of rated class in picked month in format of pdf
		is shown when the button generate report is pressed.

3.	TC_600_003	Verify Report of rated coach in picked month in format of pdf
		is shown when the button generate report is pressed.
4.	TC_600_004	Verify administrator can permanently delete an account if the
		account has requested to being close.
